

Web Developer - Job Description

# Shayan Shaikh

## Responsibilities Include:

- Build, test and set up cutting-edge internal-reporting web applications in an efficient manner; work with other developers to fill data acquisition requirements
- Identify and fix CSS, HTML and scripting compatibility issues between a variety of platforms and browsers; test websites on different browsers and mobile device browsers; correct problems identified by customer feedback
- Develop new internal user-facing features and translating company needs into functional and appealing interactive applications
- Assure that all user input is validated before submitting to back-end services
- Create quality mockups and prototypes
- Ensure the technical feasibility of UI/UX designs
- Help back-end developers with coding and troubleshooting
- Build reusable code and libraries for future use
- Provide detailed explanations of website specifications, such as activities, software, product features, programming languages, communication protocols and operating systems hardware and software
- Stay up-to-date on emerging technologies
